

# Cable support solutions

Cable ladder, tray, and supports

Eaton and Cooper united.

Energizing a world  
that demands more.

Discover today's Eaton.

### Powering business worldwide

As a global diversified power management company, we help customers worldwide manage the power needed for buildings, aircraft, trucks, cars, machinery and businesses.

Eaton's innovative technologies help customers manage electrical, hydraulic and mechanical power more reliably, efficiently, safely and sustainably.

**EATON**

*Powering Business Worldwide*

## We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

We provide integrated solutions that help make energy, in all its forms, more practical and accessible.

With 2012 sales of \$16.3 billion, Eaton has approximately 103,000 employees around the world and sells products in more than 175 countries.

## Eaton's electrical business

### Eaton is a global leader with expertise in:

- Power distribution and circuit protection
- Backup power protection
- Solutions for harsh and hazardous environments
- Lighting and security
- Structural solutions and wiring devices
- Control and automation
- Engineering services

Eaton is positioned through its global solutions to answer today's most critical electrical power management challenges. With 100 years of electrical experience behind us, we're energized by the challenge of powering up a world that demands twice as much energy as today. We're anticipating needs, engineering products, and creating solutions to energize our markets today and in the future.

We are dedicated to ensuring that reliable, efficient and safe power is available when it's needed most.

CoSPEC, the Specifier Center, is designed to help you easily SELECT, VIEW and DOWNLOAD B-Line product design content in any one of nearly one hundred non-proprietary and proprietary CAD, BIM, PDMS, and graphics formats, which helps speed the integration of the content into your design project.

## Features

- Easy integration and configuration
- Comprehensive library of 2D drawings and 3D models for CAD, BIM, PDMS, SP3D, and graphics output
- The most up to date software versions and product data information are always available
- Submittals and specification sheets in PDF format
- Proprietary file format outputs are native to the chosen software

## Nearly a Hundred Download Options

- Aveva PDMS and Intergraph SmartPlant SP3D (on select products) content
- Autodesk Revit output available
- Proprietary formats from AutoCAD to SolidWorks to Catia
- Non-proprietary formats like DXF, STEP, and more
- Graphics files in a number of formats including EPS

To get started planning your next project, visit [www.cooperblineline.com/CoSPEC](http://www.cooperblineline.com/CoSPEC)

# Introduction

---

## About Eaton's B-Line Business

Eaton's B-Line Business is a global provider of innovative, labor-saving cable management systems, support systems, and enclosure solutions for engineered facility subsystem applications. With a full range of cable support solutions, we offer one of the lowest lifetime cost of ownership.

We are dedicated to servicing our global customer base with manufacturing and technical expertise. Our manufacturing facilities are located in South Korea, Malaysia, Kingdom of Saudi Arabia, United States of America, and Canada. In addition, we offer best-in-class specification engineering services, which provide pre- and post-sale engineering and technical support.

## NOTICE

Eaton's B-Line Business reserves the right to change the specifications, materials, equipment, prices or the availability of products at any time without prior notice. While every effort has been made to assure the accuracy of information contained in this catalog at the time of publication, B-Line is not responsible for inaccuracies resulting from undetected errors or omissions.

# Structural Steel Savings

## Reduce Structural Steel Supports

With B-Line cable ladder systems, you can reduce the number of structural steel supports by as much as 66%, all while meeting or exceeding global industry standards.

### Resources

By visiting <http://www.cooperblineline.com/sss>, you can access our library of resources available that demonstrate the ways a B-Line cable ladder system can help reduce engineering complexity and costs. These resources include:

- **Video:** Five minute video showing our key features and support recommendations
- **Support recommendations:** Submittal drawings showing where supports are recommended to be placed
- **Test reports:** Detailed reports highlighting our products' load testing performance in our engineering laboratories
- **Calculator:** A cost savings calculator that estimates potential savings based on user-entered variables

### For Steel & Aluminum Cable Ladder

### For Aluminum Cable Ladder

## 5 Key Product Attributes

### I-Beam Side-Rail Design

- Maximizes stiffness
- Offers positive rung support
- Enhances clamping options
- Carries load on longer spans, reducing support requirements

I-Beam Design Can Carry up to 2.3 Times More Load than C-Channel

### Application - Specific Materials

- Hot-dip galvanized steel
- 316 Stainless Steel
- Marine-grade, copper-free aluminum
- Ensures the best material for the application to carry the load over the longest span

Application Specific Materials Maximize Options

### Splice Plate Design

- Enhances the structural integrity and strength of the system, reducing support requirements
- UL Classified as an equipment grounding conductor, eliminating bonding jumpers

Splice Plates Enhance Structural Integrity

### Application - Specific Specialty Splices

- Patented design
- Designed for thermal expansion and contraction
- Structural integration maintains load carrying capacity, reducing support requirements

Specialty Splice Plates Allow Load Transfer

### Fitting Designs

- Industry-leading 75mm to 100mm tangents
- Maximizes strength and load carrying capacity, reducing support requirements

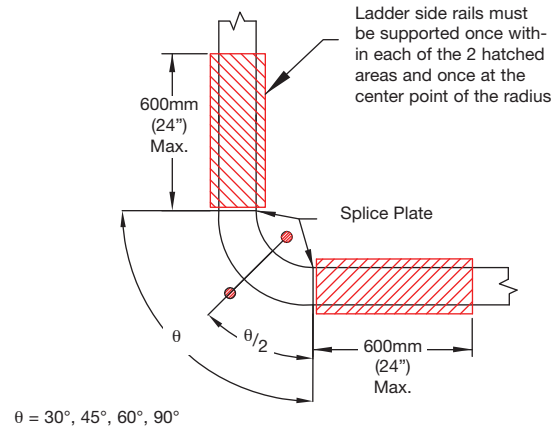

75mm or 100mm Tangents

# Structural Steel Savings

## Support Recommendations Horizontal Bends

### NEMA Standard 900mm (36") Radii

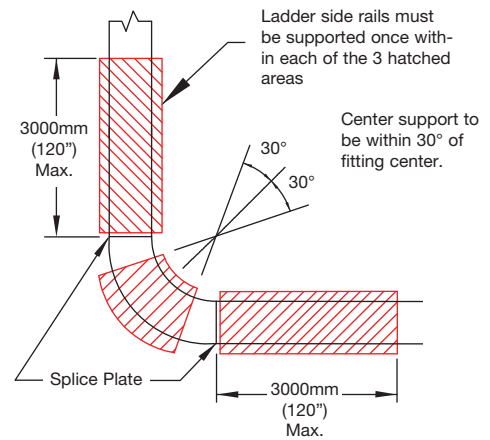

- Attached ladder supported within 600mm of splice
- Fittings supported at radius center point on both sides
- Three total supports recommended per fitting

## B-Line Recommendations

### Option 1 900mm (36") Max Radii

- Attached ladder supported up to half span (3000mm max)
- Fittings supported within 30° of radius center point on both sides
- One support recommended per fitting with flexibility for placement and distance on ladder supports

### Option 1 900mm (36") Max Radii

- Attached ladder supported within 600mm of splice
- Fitting support is eliminated
- Two total supports recommended per fitting

## Support Recommendations Horizontal Tees

### NEMA Standard 900mm (36") Radii

- Attached ladder supported within 600mm of splice
- Fittings supported once on each side rail
- Six total supports recommended per fitting

## B-Line Recommendations

### Option 1 900mm (36") Max Radii

- Attached ladder supported up to half span (3000mm max)
- Fittings supported twice within defined area
- Two supports recommended per fitting with flexibility for placement and distance on ladder supports

### Option 2 900mm (36") Max Radii

- Attached ladder supported within 600mm of splice
- Fitting supports are eliminated
- Three total supports recommended per fitting

# Structural Steel Savings

## Support Recommendations Horizontal Crosses

### NEMA Standard 900mm (36") Radii

- Attached ladder supported within 600mm of splice
- Fittings supported once on each side rail
- Eight total supports recommended per fitting

## B-Line Recommendations

### Options 1 & 2 900mm (36") Max Radii

- Attached ladder supported up to half span (3000mm max)
- Fitting supported twice within defined area
- Two supports recommended per fitting with flexibility for placement and distance on ladder supports

### Option 3 900mm (36") Max Radii

- Attached ladder supported within 600mm of splice
- Fitting supports are eliminated
- Four total supports recommended per fitting

## Support Recommendations Vertical Inside/Outside Bends

### NEMA Standard 900mm (36") Radii

- Attached ladder supported within 600mm of splice
- Fittings supported Twice on each side rail
- Three total supports recommended per fitting

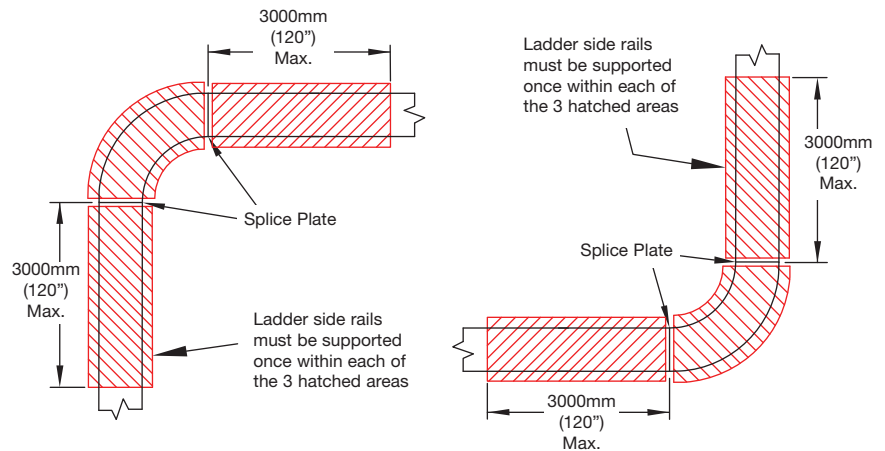

Vertical cabletray elbows at the top of runs should be supported at each end. At the bottom of runs, they should be supported at the top of the elbow and within the hatch area.

## B-Line Recommendations

### Options 1 & 2 900mm (36") Max Radii

- Attached ladder supported up to half span (3000mm max)
- Fitting supported once on each side rail
- One total support recommended per fitting with flexibility for placement and distance on ladder supports

### Option 3 900mm (36") Max Radii

- Attached ladder supported within 300mm of splice and a maximum of 3000mm straight section in the transition between the fittings
- Fitting supports once on each side rail
- One total support recommended per fitting with flexibility for placement and distance on ladder supports

# Cable Ladder Selection Guide

B-Line hot dip galvanized and stainless steel cable ladder, manufactured and tested to IEC standards, are considered the premier product offering for any industrial cable management application. Three cable ladder series are available to help optimize design and lower total installed cost.

**High Performance Ladder (HPL) Series** – Designed to reduce overall weight in weight sensitive environments while increasing strength. Ideal for offshore and modular applications where weight reduction is imperative. Visit [www.cooperbline.com/hpl](http://www.cooperbline.com/hpl) to learn more.

- Lightweight – design optimized to exceed load requirements while keeping weight to a minimum
- Stainless steel 316 construction
- I-Beam side rail - maximizes strength
- Rolled components add strength
- Slotted side rails help reduce labor by eliminating the need to drill new splice holes after cutting
- Slotted rungs for cable and accessory attachment
- ABS Type Approved
- DNV Certified load tests

**Standard Duty Ladder (SDL) Series** – Designed for applications where long spans (3m to 6m) can be utilized to decrease support costs while maintaining load requirements. Ideal for any cable management application where high cable loads are required.

- Long Spans – Available in 3 meter and 6 meter lengths.
- Designed for use with 6m spans and still maintain high cable loads, while reducing support requirements.
- Structural Steel Savings support recommendations apply (see pages 5-10)
- Available in Stainless steel 316 and Hot-Dip Galvanized
- I-Beam side rail - maximizes strength over longer spans
- Rolled components add strength
- Slotted side rails help reduce labor by eliminating the need to drill new splice holes after cutting
- Slotted rungs for cable and accessory attachment
- ABS Type Approved

**Heavy Duty Ladder (HDL) Series** – Designed for extreme cable and environmental load conditions where long spans (3m to 6m) can be utilized to decrease support costs. Ideal for heavy industrial applications where environmental conditions such as wind, snow, and ice add significant load requirements.

- Superior Strength – Maximized material efficiency for maximized loads
- Structural Steel Savings support recommendations apply (see page 5-10)
- Available in Stainless steel 316 and Hot-Dip Galvanized
- I-Beam side rail - maximizes strength over longer spans
- Rolled components add strength
- Slotted side rails reduce labor by eliminating the need to drill new splice holes after cutting
- Slotted rungs for cable and accessory attachment
- ABS Type Approved

## Perforated & Solid Bottom Cable Tray Selection Guide

The B-Line perforated and solid bottom cable tray portion of this catalog is divided into two sections:

- Northern Asia (pages 53-78)
- Southern Asia (pages 79-104)

The differentiation between the geographic regions is based solely upon product manufacturing locations – Korea for Northern Asia, and Malaysia for Southern Asia and Australia

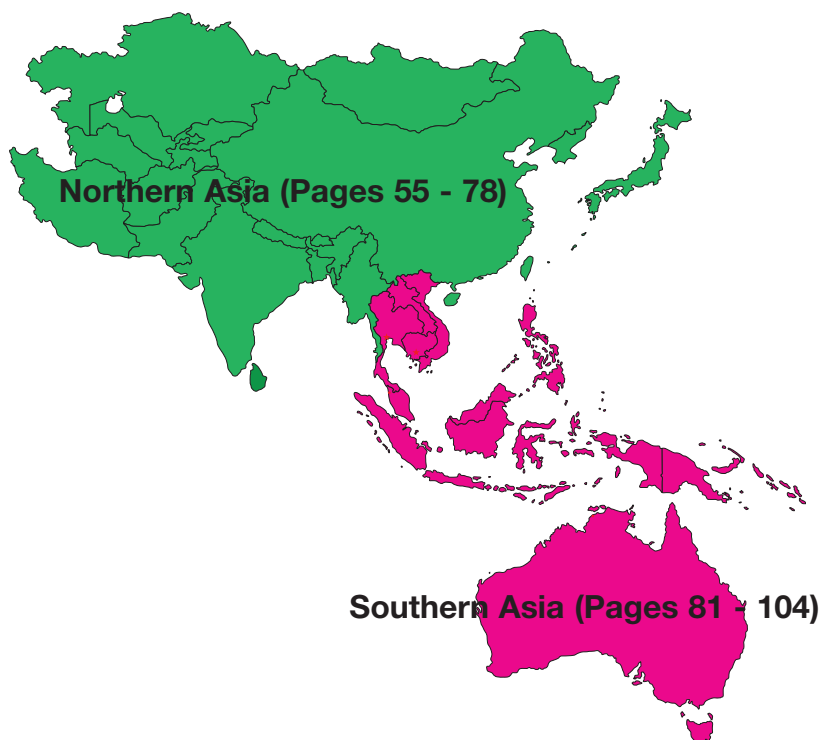

All perforated and solid bottom cable tray part numbers designate either a ‘NA’ or a ‘SA’ at the end to denote the manufacturing location. The following is an example of the same part with different manufacturing location designations.

Part Numbering Example	
Part Number	Manufacturing Location
P025VCP15SS-400-3000-NA	Korea
P025VCP15SS-400-3000-SA	Malaysia

Perforated and Solid Bottom Cable Tray product selection should be dependent upon the region that is closest to the final destination of the product.

For example, for product with a destination of Sydney Australia, it is recommended to use Southern Asia part numbers to ensure the lowest possible freight cost. Providing part numbers dependent upon manufacturing location allows our customers to reduce total cost by reducing freight to their project destination from the manufacturing facility.

For reference and as a general guideline, use the following to help determine which section of the catalog should be used.

# Cable Ladder Construction

## Cable Ladder Construction - Side Rails

B-Line cable ladder side rails have an engineered I-Beam shape to provide system integrity. The I-Beam is the most efficient structural shape, providing strength without increasing the weight of the side rail itself. This shape, in conjunction with the slots in the side rails, offers the optimum design.

In addition, the I-Beam shape has a number of other advantages:

- 1) Roll-formed steel increases the strength of the steel itself
- 2) Enlarged top flange adds stiffness to the system
- 3) Bend in side rail to lock in rung position and provide more material for a solid weld
- 4) Bottom rail surface provides positive support for rungs
- 5) Slotted side rail design reduces installation time

## Profile Dimensions

Dimensions are in mm

## Side Rails: Strength and Safe Working Load

Side rails provide the strength of the ladder system. The load ratings for the side rails in this catalog are based on testing to IEC 61537, 2006 Edition, Test Type II. Values in the catalog load charts are based upon allowable deflection and safe working loads calculated using a 1.7 factor of safety.

## Cable Ladder Construction - Rungs

Rungs are designed to maintain the system strength and provide a convenient place to affix cables. All rungs have slots on the upper surface, sized for M10 hardware, to allow for the attachment of banding or cleats.

### Rungs

Standard rungs (C) have a profile as shown in the rung profiles below. Spacing is 300mm, measured center-to-center. The standard rung orientation is all rung openings down (D) with options of all rung openings up (U), or alternating rung openings up and down (A). There are two profiles of rungs available as shown in the rung profiles dimensions below. A standard rung version (C) and a strut rung version (B).

### Rung Options

- **Rung Spacing:** Rungs can be spaced at intervals other than 300mm on straight sections only. To order an alternate rung spacing, change the default “300” value for the spacing following the material type or finish. Non-standard rung spacing is not available on fittings.

***Example:** 125G200CA15ILL-0600-3000 is a ladder with 125mm height, hot dip galvanized finish, 200mm rung spacing, SDL Series, 600mm width, and a 3m length.*

- **Strut Rung:** A strut-type profile can be ordered instead of the standard profile. To order a strut-type rung, change the default “C” value for standard rung to a “B” for strut-type rung.

***Example:** 125G300BA15ILL-0600-3000 is a ladder with 125mm height, hot dip galvanized finish, 300mm rung spacing, strut type rung, SDL Series, 600mm width, and a 3m length.*

- **Rung Orientation:** Rungs can be oriented with open side up or alternating, instead of the standard down orientation. To order rungs with all up or alternating orientation, change the default “D” value for down rungs to “U” for all rungs with open side up or “A” for alternating up and down rungs.

***Example:** 125G300CU15ILL-0600-3000 is a ladder with 125mm height, hot dip galvanized finish, 300mm rung spacing, standard rung, all rungs oriented with open side up, SDL Series, 600mm width, and a 3m length.*

### Rung Profile Dimensions

Dimensions are in mm

# Cable Ladder Construction

## Cable Ladder Construction - Fittings

B-Line cable ladder fittings are designed to carry loads greater than the straight sections. The C-shape of the fitting side rails is designed with the same height and width for easy attachment to straight sections.

### Fittings

All fittings have a straight tangent section at each end. The tangent allows the splice plate to be flush against both the straight section and the fitting when they are connected, increasing the contact surface area and the strength of the overall system.

Standard rung spacing for fittings is 300mm, measured center-to-center, and the standard rung orientation is down. Different rung types and orientations are available (see “Cable Ladder Construction - Rungs” reference page 14).

### Fitting Options

- **Radius:** Alternate radiuses may be available on request. Please consult B-Line for applications where a radius other than 300mm, 600mm, 900mm, or 1200mm is required.

### Profile Dimensions

All dimensions are in millimeters unless otherwise specified.

# Cable Ladder - Straight Section Covers

## Covers

Solid Flanged

Ventilated Flanged

**A full range of covers is available for straight sections and fittings.**

**Solid covers** should be used when maximum enclosure of the cable is desired and no accumulation of heat is expected.

**Ventilated covers** allow heat to escape.

B-Line recommends that covers be placed on vertical cable ladder runs to a height of 1.5m to 2.5m above the floor to isolate both cables and personnel.

Cover clamps are not included with the cover and must be ordered separately.

### Steel Cover Part Numbering

Prefix  
Example: **CIF S G15 LL - 0600 - 3000**

Flanged Cover	Cover Type	Material	Ladder Straight Section	Width (mm)	Length *
	<b>S</b> = Solid	<b>G15</b> = Galvanized Steel		<b>0150</b> = 150mm	<b>1500</b> = 1.5m
	<b>L</b> = Ventilated	<b>X10</b> = Stainless Steel 316		<b>0300</b> = 300mm	<b>3000</b> = 3.0m
	<b>P</b> = Peaked			<b>0450</b> = 450mm	
				<b>0600</b> = 600mm	
				<b>0750</b> = 750mm	
				<b>0900</b> = 900mm	

\* 750 (750mm) and 900 (900mm) widths only available in 1500 (1.5m) lengths.

# Cable Ladder - Cover Clamps

Ladders & Covers

## High Performance Cover Clamp

- Withstands 76m/s (170 MPH) wind loads
- Sold per piece with hardware
- (\*) Finish: Insert MZ or X for SS6

### Number of Clamps for Wind Speeds Up To 76m/s (170 MPH)

Assembly	Cover Size	# of Clamps
Straight Section	1.5m length	4
	3.0m length	6
30° - 60° Horizontal Bend	All radii	4
90° Horizontal Bend	150mm to 600mm radius	4
	900mm to 1200mm radius	6
30° - 60° Vertical Bend	All radii	4
90° Vertical Bend	150mm to 600mm radius	4
	900mm to 1200mm radius	6
Horizontal Tee	150mm to 600mm radius	6
	900mm to 1200mm radius	8
Horizontal Cross	150mm to 600mm radius	8
	900mm to 1200mm radius	12

Catalog Number	Description	Raised Height	
		mm	In.
LCCSD(*)	Standard Clamp	--	--
LCCSDR(*)	Raised Clamp	35.5	1.4

Visit [www.cooperblinc.com/ccs](http://www.cooperblinc.com/ccs) for installation instructions and additional clamp quantities for other fittings.

## Standard Cover Clamp

- For indoor service only
- Sold per piece with hardware
- (\*) Finish: Insert G or SS6

Ladder Height	Catalog No.
125	LCL125(*)
150	LCL150(*)

### Quantity of Standard Cover Clamps Required

Assembly	Cover Size	# of Clamps
Straight Section	1.5m length	4
	3.0m length	6
Horizontal & Vertical Bend	All radii	4
Horizontal Tees	All radii	6
Horizontal Crosses	All radii	8

Note: When using the Heavy Duty Cover Clamp, only one-half the number of clamps stated above is required.

## Heavy Duty Cover Clamp

- Recommended for outdoor service
- (xx) Insert tray width - 150 to 900
- Includes M10 hardware
- (\*) Finishes available: G or SS6

Ladder Height mm	Catalog No.
125	LCH125(*) (xx)
150	LCH150(*) (xx)

All dimensions are in millimeters unless otherwise specified.

# Cable Ladder - Fittings & Covers

Fittings & Covers

# Cable Ladder Fittings

B-Line Cable Ladder Fittings are designed to support cables as they transition directions. Side rails are C-shaped with standard 300mm rung spacing.

Fittings engineered with 100mm tangents for splicing integrity.

Fittings & Covers

## Fittings Part Numbering

Prefix  
Example: **125 G 300 C D 20C** LVO - 0600 - 90 R0600

# Cable Ladder Fittings

## Cable Support Fittings (LCSF)

Splice plates not supplied with fittings.  
 Order standard splice plates separately from page 37.  
 One (1) pair required to connect to system.

This fitting is recommended for use at the top of vertical runs to support the weight of the cables. The top cross brace is drilled for installing eye bolts, ordered separately.

Bend Radius R mm	Ladder Width mm	Catalog No. mm	Side Rail Height "H"			
			125mm		150mm

# Cable Ladder Fittings

B-Line Cable Ladder Reducing and Expanding Fittings are designed to support cables as they transition directions. Side rails are C-shaped with standard 300mm rung spacing.

Fittings engineered with 100mm tangents for splicing integrity.

Fittings & Covers

All dimensions are in millimeters unless otherwise specified.

# Cable Ladder Fittings

## Fitting Covers

Solid Flanged

Ventilated Flanged

A full range of covers are available for fittings.

**Solid covers** should be used when maximum enclosure of the cable is desired and no accumulation of heat is expected.

**Ventilated covers** allow heat to escape.

B-Line recommends that covers be placed on vertical cable ladder runs to a height of 1.5m to 2.5m above the floor to isolate both cables and personnel.

**Flanged covers** have a 12mm flange. Cover clamps are not included with the cover and must be ordered separately.

### Fitting Covers Part Numbering

Example: **CCF S G15 LVO - 0600 - 90 R0600 - 150\*\*\***

Flanged Cover	Cover Type	Material	Ladder Fitting Type	Width	Angle † (°)	Radius	Side Rail Height
	<b>S</b> = Solid	<b>G15</b> = Galvanized Steel	<b>LHB</b> = Horizontal Bend <b>LVI</b> = Vertical Inside Bend <b>LVO</b> = Vertical Outside Bend	<b>0150</b> = 150mm <b>0300</b> = 300mm <b>0450</b> = 450mm <b>0600</b> = 600mm <b>0750</b> = 750mm <b>0900</b> = 900mm	<b>30</b> <b>45</b> <b>60</b> <b>90</b>	<b>R0300</b> = 300mm <b>R0600</b> = 600mm <b>R0900</b> = 900mm <b>R1200</b> = 1200mm	<b>125</b> = 125mm <b>150</b> = 150mm
	<b>L</b> = Louvered	<b>X10</b> = Stainless Steel 316	<b>LHT</b> = Horizontal Tee † <b>LHX</b> = Horizontal Cross † <b>LVTD</b> = Vertical Tee Down † <b>LVTU</b> = Vertical Tee Up † <b>LCSF</b> = Cable Support Fitting †				*** Required for VO, VTD, CSF only
	<b>P</b> = Peaked						

† No angle designation required on these fitting covers.

### Expanding & Reducing Fitting Covers Part Numbering

Example: **CCF S X10 LRR - 0600 - 0300 R0300**

Flanged Cover	Cover Type	Material	Ladder Fitting Type	Width 1	Width 2	Radius
	<b>S</b> = Solid	<b>G15</b> = Galvanized Steel	<b>LRR</b> = Right Reducer <b>LLR</b> = Left Reducer <b>LSR</b> = Straight Reducer	<b>0150</b> = 150mm <b>0300</b> = 300mm <b>0450</b> = 450mm <b>0600</b> = 600mm <b>0750</b> = 750mm <b>0900</b> = 900mm	<b>0150</b> = 150mm <b>0300</b> = 300mm <b>0450</b> = 450mm <b>0600</b> = 600mm <b>0750</b> = 750mm <b>0900</b> = 900mm	<b>R0300</b> = 300mm <b>R0600</b> = 600mm <b>R0900</b> = 900mm <b>R1200</b> = 1200mm
	<b>L</b> = Louvered	<b>X10</b> = Stainless Steel 316	<b>LRX</b> = Expanding & Reducing Cross <b>LET</b> = Expanding Tee <b>LRT</b> = Reducing Tee			
	<b>P</b> = Peaked					

See page 20 for cover clamp options.

All dimensions are in millimeters unless otherwise specified.

# Cable Ladder Accessories

Accessories

# Cable Ladder Accessories

## Standard Splice Plates

- Not included with straight sections or fittings.
- Standard 8-slot pattern.
- Supplied in pairs with hardware.
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.
125	LSP125(*)
150	LSP150(*)

## Expansion Splice Plates

- Expansion plates allow for 25mm expansion or contraction of the cable ladder, or where expansion joints occur in the supporting structure.
- Supplied in pairs with hardware.
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.
125	LES125(*)
150	LES150(*)

## Vertical Adjustable Splice Plates

- These plates provide for changes in elevation that do not conform to standard vertical fittings.
- Supplied in pairs with hardware.
- **Bonding Jumpers are not required.**
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.
125	LVA125(*)
150	LVA150(*)

## Reducing Coupler Plate

- For offset transitions.
- Supplied as one plate with hardware.
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.	'L' mm
125	LSR125(*)150	150
	LSR125(*)300	300

## Horizontal Adjustable Splice Plates

- Offered to adjust a cable ladder run for changes in direction in a horizontal plane that do not conform to standard horizontal fittings.
- Supplied in pairs with hardware.
- Rail extensions 1000mm length standard, LHA splices included.
- (\*) Insert G or SS6

### Splice Kit

Ladder Height mm	Catalog No.
125	LHA125(*)
150	LHA150(*)

### Rail Extension Kit

Ladder Height mm	Catalog No.
125	LRE125(*)-1000
150	LRE150(*)-1000

## Reversing Splice Plates

- For reversing ladder orientation.
- Supplied as one pair with hardware.
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.
125	LRS125(*)
150	LRS150(*)

## Splice Hardware

**Catalog No. M10x20 SNCB(\*)**

Square Neck Coach Bolt

**Catalog No. M10 SFHN(\*)**

Serrated Flange Hex Nut

**Catalog No. M10 ELAS(\*)**

Elastic Stop Nut

**Finish (\*):** HDG = Hot Dipped Galvanized  
SS6 = Stainless Steel 316

## Heavy Duty Expansion Splice Plates

Heavy Duty Expansion Splice Plates are engineered to eliminate the recommended additional support at each expansion joint where cable ladder systems are utilized. They allow installers to support an expansion joint without additional supports versus the traditional two supports.

Expansion joints are common in long-run outdoor applications where temperature variations result in thermal expansion and contraction of the cable ladder system. The installer using the traditional expansion splice would be required to install two supports, one on either side of the expansion joint. By utilizing the B-Line Heavy Duty Expansion Splice Plate, no additional supports are required.

- NEMA VE 2 Compliant
- Lowest total cost of installation solution
- Wrap-around design supports the side rail on bottom of each ladder section
- Available Offering:
  - Hot dip galvanized steel
  - Stainless steel 316
- Designed for easy installation in a variety of applications
- Supplied in pairs with hardware
- Utilize with B-Line Cable Ladder Systems
  - HPL, SDL, & HDL

Heavy Duty Expansion Splice Plates are one of five key attributes of the B-Line cable ladder system that combine to yield significant opportunities to reduce structural steel supports in heavy industrial applications by up to 66%. To learn more, visit [www.cooperblineline.com/sss](http://www.cooperblineline.com/sss).

150	LTC150(*)

## Bonding Jumper

Use at each expansion splice and where the cable ladder is not mechanically/electrically continuous to ground.

- Sold individually.
- Hardware included.
- Bonding jumper is 406mm long.

Catalog No.	Copper Wire	Ampacity
99-N1	9 Strands #1	600

## Blind End

- For finished look to end of ladder.
- Supplied as one plate with hardware.
- (\*) Insert G or SS6

Ladder Height mm	Catalog No.	'L' mm
125	LBE125(*)150	150
	LBE125(*)300	300

	LBE150(*)600	600
	LBE150(*)900	900

## Ladder Drop-Out

- Specially-designed Ladder Drop-Outs provide a rounded surface with 100mm radius to protect cable as it exits from the cable ladder, preventing damage to insulation. The drop-out will attach to any desired rung.
- Supplied with hardware.
- (\*) Insert G or SS6

## Threaded Rod (ATR) & Rod Coupling

Loading based on safety factor 5.

See B-Line Strut Systems Catalog for other size and finish options.

Catalog No. & Size	Threads Size	Recommended Load kN	Wt./30.5m kg
ATR M6	M6	1.32	6.1
ATR M8	M8	2.42	10.7
ATR M10	M10	3.66	15.3
ATR M12	M12	5.35	24.4

## Cable Ladder Clamp/Guide - SDL & HDL Series

- Features a no-twist design.
- Has four times the strength of the traditional design.
- Each side is labelled to ensure proper installation.
- Supplied in pairs without hardware.
- (\*) Insert G or SS6

Patent # RE35479

Catalog No.	Overall Length	Hardware Size
9(*)-1204	38mm	M6
9(*)-1208	57mm	M10
9(*)-1205	57mm	M12

When installing this device as an expansion guide on the outside flange of *Side Rail*, use the Catalog No. **B202** Square Washer (see page 130) in order to properly elevate the guide.

## Cable Ladder Clamp/Guide - HPL Series

- Improves performance - see HPL Series Load Tables below
- Both LHD-121X and LHD-123X are sold in pairs
  - LHD-121X - requires mounting hardware (not included)
  - LHD-123X includes side rail attachment hardware - requires mounting hardware (not included)
- Material: SS6
- Thickness: 6mm
- Patent Pending

Catalog Number	Description	Side Rail Mtg. Hardware	Mounting Hardware
LHD-121X	1-Hole Hold Down Plate	None Required	(1) M12 HHCS
LHD-123X	3-Hole Hold Down Clamp	Includes (2) M10 SNCB & SFHN	(1) M12 HHCS

# Cable Ladder Accessories

## Straight Divider

- Standard length: 3000mm (3m) or 1000mm (1m).
- Order catalog number based on loading depth.
- Supplied with mounting hardware.
- Supplied with 99-9982 divider splice.
- (\*) Insert G or SS6

Catalog No.	Side Rail Height mm	Length mm
LSD125(*)-3000	125	3000
LSD150(*)-3000	150	3000

## Bendable Divider

- Horizontal Bend Barriers are flexible in order to conform to any horizontal fitting radius. Cut to length.
- Order catalog number based on loading depth.
- Supplied with mounting hardware.
- Standard length is 1000mm (1m), sold individually.
- Supplied with 99-9982 divider splice.
- (\*) Insert G or SS6

Catalog No.	Side Rail Height mm	Length mm
LBD125(*)-1000	125	1000
LBD150(*)-1000	150	1000

## Vertical Dividers

- Vertical Bend Barriers are preformed to conform to a specific vertical fitting.
- Supplied with mounting hardware and a 99-9982 Divider Splice.
- (\*) Insert G or SS6 for finish
- (\*\*) Insert 30, 45, 60 or 90 for degrees
- (\*\*\*) Insert 300 for 300mm, 600 for 600mm, 900 for 900mm, or 1200 for 1200mm for radius

Inside Bend (VI)

Outside Bend (VO)

All dimensions are in millimeters unless otherwise specified.

## Metric Cable Ladder Technical Guide

The technical data contained within this guide is intended to provide the engineer with adequate information to design and specify an efficient and robust cable ladder system. B-Line recommends that the engineer considers the following subjects when designing the cable ladder system which are detailed within the corresponding sections of this guide:

1. Side Rail and Rung Design
2. Materials
3. Finish
4. Corrosion
5. Load Performance Type Tests
6. Environmental Loads
7. Impact
8. Electrical Continuity
9. Free Base Area
10. Thermal Contraction and Expansion
11. Support and Installation Recommendations
12. Cable Restraint

### 1. Side Rail and Rung Design

B-Line cable ladder side rail uses a high performance rolled I-Beam profile. The more complex the structural profile, the higher the strength yielded by the profile. The rolled I-Beam profile provides greater performance than standard C-section and complex C-section profiles commonly used in cable ladder designs. Due to the higher performance provided by the I-Beam it allows for a reduced material gauge thickness, reducing product weight.

The slotted side rail is designed to provide equally spaced slots along the entire length. These allow for the installer to field cut and modify the standard length and connect new lengths and/or fittings with a standard splice plate without the need for on-site drilling. The slots also allow the designer and installer to use the slots for the attachment of additional accessories and equipment, again without the need to drill the cable ladder. In addition, the slots result in a lighter weight ladder with increased ventilation.

## 2. Materials

MATERIAL	STANDARD	GRADE
Steel	BS EN 10025-2 : 2004	S275 or equivalent
Stainless Steel	BS EN 10088-2 : 2005	1.4404 (AISI 316)

### Steel Grade S275:

B-Line cable ladder is manufactured from continuously roll formed Grade S275 structural steel or equivalent. Use of a structural grade steel guarantees the material to meet the minimum structural and chemical properties specified in the BS EN 10025-2 : 2004 standard.

### Steel Grade S275:

Typical Chemical Composition												
Name	Number	Deoxidation Method	C % For thickness range			Si max	Mn max	P max	S max	N max	Cu max	Other
			=< 16	> 16 =<40	>40	%	%	%	%	%	%	%
S275	1.0145	FF	0,21	0,21	0,21	-	1,6	0,035	0,035	-	0,60	-

Typical Mechanical Properties															
Name	Number	ReH Minimum Yield strength (MPa ) for nominal thickness(mm)								R m (MPa) for nominal thickness (mm)					
		<16	=>16	>40	>63	>80	>100	>150	>200	>250	<3	=>3	>100	>150	>250
			=< 40	=< 63	=< 80	=< 100	=< 150	=< 200	=< 250	=< 400		=< 100	=< 150	<= 250	=< 400
S275	1.0145	275	265	255	245	235	225	215	205	195	430-580	410-560	400-540	380-540	380-540

## Stainless Steel Grade 1.4404 (AISI 316L):

B-Line cable ladder is manufactured from continuously roll formed Grade 1.4404 (AISI 316L) stainless steel. Grade 1.4404 is a non-magnetic stainless steel and part of the “austenitic” group of stainless steels. It is designed to withstand corrosive atmospheres, low and high ambient and operating temperatures. Grade 1.4404 is a superior grade of stainless steel due to it containing molybdenum. This enhances its resistance to corrosion and makes it appropriate for use in marine salt laden saliferous environments. The importance of using Grade 1.4404 (AISI 316L) relates to the corrosion resistance of the steel after welding. Stainless steel resists corrosion because it forms an impervious passive oxide layer on its surface which forms when oxygen is present. When stainless steel is welded it may lead to a chromium carbide to precipitate at the grain boundaries, depleting the chromium within the austenite and preventing the passive oxide layer from forming. Due to the grain boundaries being small and highly anodic, a rapid corrosion can occur. This process can be prevented by using stainless steels with a carbon content of less than 0.03%. Grade 1.4404 typically has less than 0.03% carbon content.

There are a number of important factors that can make the use of stainless steel imperative. These factors can include long term maintenance costs, corrosion resistance, aesthetic appearance, and ambient operating temperature. Grade 1.4404 stainless steel exhibits stable structural properties such as yield strength and high creep strength at lowered and elevated ambient operating temperatures.

B-Line cable ladder is welded using a stainless steel welding wire to ensure each weldment exhibits the same corrosion resistance as the base metal. Localized staining in the weld area/heat effected zone may occur when exposed to severe corrosive environments. The shielding gases and low carbon materials used in our welding processes minimise carbon contamination during welding to reduce staining and stress corrosion.

## Stainless Steel Grade 1.4404 (AISI 316L):

Typical Chemical Composition													
Name	Number	C	Si	Mn	P max.	S	N	Cr	Cu	Mo	Nb	Ni	Others

		P	75	220	520-670	45
		H	13,5	220	530-730	35
		P	75	220	520-720	35

## 3. Finish

### Zinc Coatings

Zinc protects steel in two ways. First it protects the steel as a coating and second as a sacrificial anode to repair bare areas such as cut edges, scratches, and gouges. The corrosion protection of zinc is directly related to its thickness and the environment. This means a .2 mil coating will last twice as long as a .1 mil coating in the same environment.

Galvanizing also protects cut and drilled edges.

### Hot Dip Galvanized After Fabrication

(Hot dip galvanized or batch hot dip galvanized)

Hot Dip Galvanized After Fabrication cable ladder products are fabricated from steel and then completely immersed in a bath of molten zinc. A metallic bond occurs resulting in a zinc coating that completely coats all surfaces, including edges and welds.

Another advantage of this method is coating thickness. Cable ladders hot dip galvanized after fabrication to provide an average minimum zinc coating thickness in accordance with BS EN ISO 1461. The zinc thickness is controlled by the amount of time each part is immersed in the molten zinc bath as well as the speed at which it is removed. The term "double dipping" refers to parts too large to fit into the galvanizing kettle and, therefore, must be dipped one end at a time. It does not refer to extra coating thickness.

The layer of zinc which bonds to steel provides a dual protection against corrosion. It protects first as an overall barrier coating. If this coating happens to be scratched or gouged, zinc's secondary defense is called upon to protect the steel by galvanic action.

Hot dip galvanizing after fabrication is recommended for prolonged outdoor exposure and will protect steel for many years in most outdoor environments and in many aggressive industrial environments .

## 4. Corrosion

IEC 61357 : 2006 section 6.5.2, Table 1 "classification for resistance against corrosion" defines the classification class of various materials and finishes used in the manufacture and supply of cable ladder systems against resistance to corrosion.

In accordance with this classification table, B-Line cable ladder can be supplied as to meet the following classifications:

Steel HDG : Class 6

Stainless Steel 1.4404 : Class 9B

Stainless Steel 1.4404 : Class 9D

### Stainless Steel

Several important conditions could make the use of stainless steel imperative. These include long term maintenance costs, corrosion resistance, appearance and locations where product contamination is undesirable. Stainless steel exhibits stable structural properties such as yield strength and high creep strength at elevated temperatures.

## 5. Load Performance Type Tests

B-Line cable ladder has been performance load tested in full compliance with the requirements of IEC 61537 : 2006 standard titled “Cable Management - Cable Tray Systems and Cable Ladder Systems” and load and deflection results published within this catalog are based upon these tests. Type load tests have been witnessed by DNV independent third party inspectorates. We recommend that the specifying engineer insists upon independent third party certificates confirming compliance to the IEC standard and published load tables within the manufacturer’s catalog.

B-Line has tested our cable ladder to the following type tests detailed within the IEC 61537 standard:

### Type Test - II

- L = Intermediate Span
- S = Splice Location (Mid-span)
- UDL = Uniform Distributed Load
- A,B,C = Support Positions
- D = Deflection Measuring Point (Mid-span)

## 6. Environmental Loads

### Wind Loads

Wind loads need to be considered for all outdoor cable ladder installations. The most severe loading to be considered is impact pressure normal to the cable ladder side rails.

The impact pressure corresponding to several wind velocities are given below in Table 1.

**Table 1**  
**Impact Pressures**

V (km/h)	P (kg/m <sup>2</sup> )	V (km/h)	P (kg/m <sup>2</sup> )	V (km/h)	P (kg/m <sup>2</sup> )
24	2.83	104	52.70	184	164.94
32	4.98	112	61.00	192	179.58
40	7.81	120	70.27	200	195.20
48	11.22	128	80.03	208	211.30
56	15.27	136	90.28	216	227.41
64	19.96	144	101.02	224	244.49
72	25.28	152	112.73	232	262.54
80	31.18	160	124.93	240	281.09
88	37.72	168	137.62		
96	44.94	176	150.79		

V= Wind Velocity      P= Impact Pressure

Note: These values are for an air density of 16.02 kg/m<sup>3</sup> corresponding to a temperature of 15.5° C and barometric pressure of 10,355 kg/m<sup>2</sup>.

**Example Calculation:** Side load for 150mm side rail with 160 km/h wind

$$\frac{124.93 \times 150}{1000} = 18.74 \text{ kg/m}$$

When covers are installed on outdoor cable ladders, another factor to be considered is the aerodynamic effect which can produce a lift strong enough to separate a cover from a ladder. Wind moving across a covered ladder (see detail 2) creates a positive pressure inside the ladder and a negative pressure above the cover. This pressure difference can lift the cover off the ladder.

Detail 2

B-Line recommends the use of high performance cover clamps when covered ladders are installed in an area where strong winds occur.

## Ice Loads

Glaze ice is the most commonly seen form of ice build-up. It is the result of rain or drizzle freezing on impact with an exposed object. Generally, only the top surface (or the cover) and the windward side of a cable ladder system is significantly coated with ice. The maximum design load to be added due to ice should be calculated as follows:

$$LI = \left( \frac{W \times TI}{1,000,000} \right) \times DI \text{ where;}$$

LI= Ice Load (kg/m)

W= Cable Tray Width (mm)

TI= Maximum Ice Thickness (mm)

DI= Ice Density = 913 kg/m<sup>3</sup>

the maximum ice thickness will vary depending on location. A thickness of 12mm can be used as a conservative standard.

### Example Calculation:

Ice Loads for 600mm wide tray with 12mm thick ice;

$$\frac{600 \times 12}{1,000,000} \times 913 = 6.57 \text{ kg/m}$$

## Snow Loads

Snow is measured by density and thickness. The density of snow varies almost as much as its thickness. The additional design load from snowfall should be determined using the building codes which apply for each installation.

## 7. Impact

B-Line cable ladder conforms to an Impact Test Value of 50J based on the IEC 61537:2006, Section 10.9.

## 8. Electrical Continuity

Electrical continuity testing of B-Line cable ladder was conducted in accordance with IEC 61357 : 2006, section 11.1.2 and results in an electrical impedance less than 50milli ohms across the joint and 5 milli ohms per metre without a joint.

## 9. Free Base Area

In accordance with IEC 61537; 2006, section 6.8, Table 5 “Free Base Area Classification” B-Line cable ladder has a classification of ‘Y’ on standard 300mm rung spacing and a calculated free base area of 86%.

## 10. Thermal Contraction and Expansion

It is important that thermal contraction and expansion be considered when installing cable ladder systems. The length of the straight cable tray runs and the temperature differential govern the number of expansion splice plates required (see Table 2 below).

The cable ladder should be anchored at the support nearest to its midpoint between the expansion splice plates and secured by expansion guides at all other support locations (see Figure 1). The cable ladder should be permitted longitudinal movement in both directions from that fixed point. When used, covers should be overlapped at expansion splices.

Accurate gap settings at the time of installation are necessary for the proper operation of the expansion splice plates. The following procedure should assist the installer in determining the correct gap: (see Figure 2)

- 1 Plot the highest expected metal temperature on the maximum temperature line.
- 2 Plot the lowest expected metal temperature on the minimum temperature line.
- 3 Draw a line between the maximum and minimum points.
- 4 Plot the metal temperature at the time of installation to determine the gap setting.

Figure 1

Figure 2

Table 2

Maximum Spacing Between Expansion Joints For 25mm Movement							
Temperature Differential		Steel		Stainless Steel 304		Stainless Steel 316	
°C	°F	m	Feet	m	Feet	m	Feet
13.9	25	156.0	512	105.7	347	115.5	379
27.8	50	78.0	256	53.0	174	57.6	189
41.7	75	52.1	171	35.4	116	38.4	126
55.6	100	39.0	128	26.5	87	29.0	95
69.4	125	31.1	102	21.0	69	23.2	76
83.3	150	25.9	85	17.7	58	19.2	63
97.2	175	22.2	73	15.2	50	16.4	54

Note: every pair of expansion splice plates requires two earth continuity connectors for grounding continuity.

## 11. Support and Installation Recommendations

### Deflection

Deflection in a cable ladder system is primarily an aesthetic consideration. When a cable ladder system is installed in a prominent location, a maximum simple beam deflection of 1/100 of support span can be used as a guideline to minimize visual deflection.

There are two typical beam configurations: simple beam and continuous beam.

An example of a simple beam is a single straight section of cable ladder supported, but not fastened at either end. When the ladder is loaded the cable ladder is allowed to flex. Simple beam support is seldom used in field installations.

Continuous beam is the beam configuration most commonly used in cable ladder installations. An example of this configuration is where cable ladders are installed across several supports to form a number of spans. The continuous beam possesses traits of both simple and fixed beams. When equal loads are applied to all spans simultaneously, the counter balancing effect of the loads on both sides of a support restricts the movement of the cable ladder at the support. The effect is similar to that of a fixed beam. The end spans behave substantially like simple beams. When cable ladders of identical design are compared, the continuous beam installation will typically have approximately half the deflection of a simple beam of the same span. The following factors should be considered when addressing cable ladder deflection:

1. Deflection in a cable ladder system can be reduced by decreasing the support span, or by using a taller or stronger cable ladder.
2. Economic consideration must be given when addressing cable deflection criteria. Eliminating deflection can mean purchasing a stronger ladder at higher cost.
3. The location of splices in a continuous span will affect the deflection of the cable ladder system. The splices should be located at points of minimum stress whenever practical. B-Line recommends the following for splice installation:

Straight section lengths should be equal to or greater than the span length to ensure not more than one splice between supports.

See the figures below for splicing configuration samples.

# Technical Guide

## Future Expansion Requirements

One of the many features of cable ladder is the ease of adding cables to an existing system. Future expansion should always be considered when selecting a cable ladder, and allowance should be made for additional fill area and load capacity. A minimum of 50% expansion allowance is recommended.

## Transit Limitations

Consideration should be given to the space available for moving the cable ladder from delivery to its final installation location. Shorter cable ladder allows for more maneuverability in tight spaces.

## Installation

Shorter cable ladder lengths are typically easier to maneuver on the job site during installation. Two people may be needed to manipulate longer cable ladder sections, while shorter sections might be handled by one person. Although longer cable ladder lengths are more difficult to maneuver, they can reduce installation time due to the fact that there are fewer splice connections. This trade-off should be evaluated for each set of job site restrictions.

<b>WARNING!</b> Do not use as a walkway, climbing ladder or support for personnel. Use only as a mechanical support for cables & tubing.

## 12. Cables and Cable Restraint

### Type of Cable

In general, small, highly flexible cables should be installed in cable ladders with close rung spacing of 200mm or less. Larger, less flexible cables are typically installed in cable ladders having 300mm rung spacing. Cable ladders having rung spacing greater than 300mm should be used for very large, stiff cables to reduce cost and facilitate cable drop-outs.

### Cable Exposure

Many cable jackets are manufactured to withstand the environment without additional protection, favoring the use of the cable ladder. Cable jackets should be evaluated during project design for suitability in the project application.

### Cable Attachment

A major advantage of cable ladder is the freedom of entry and exit of the cables. Another advantage of cable ladder is the ability to secure cables in the cable ladder. With standard rungs, the cables may be attached with either cable ties or cable clamps. Cable attachment is particularly important on vertical runs or when the ladder is installed on its side. Ladder rung spacing should be chosen to provide adequate cable attachment points while allowing the cables to exit the system.

### Cable Flexibility

The proper bend radius for cable ladder fittings is usually determined by the bend radius and stiffness of the cables to be installed. Typically, the cable manufacturer will recommend a minimum bend allowance for each cable. The fitting radius should be equal to or larger than the minimum bend radius of the largest cable which may ever be installed in the system. When several cables are to be installed in the same cable ladder, a larger bend radius may be desirable to ease cable installation.

### Space Limitations

The overall dimensions for a cable ladder fitting will increase as the bend radius increases. Size and cost make the smallest acceptable fitting radius most desirable. When large radius fittings are required, the system layout must be designed to allow adequate space.

**The following factors should be considered when determining the appropriate cable ladder system.**

#### Material & Finish

- Standards Available
- Corrosion
- Thermal Contraction and Expansion
- Installation Considerations and Electrical Grounding Capacity

#### Strength

- Environmental Loads
- Concentrated Loads
- Support Span
- Deflection
- Rung/Trough Data
- Load Capacity
- Cable Data

#### Width & Available Loading Depth

- Cable Diameter
- Allowable Cable Fill
- Barrier Requirements
- Future Expansion Requirements
- Space Limitations

#### Length

- Lengths Available
- Support Spans (Not to exceed the length of straight sections)
- Space Limitations
- Installation

#### Loading Possibilities

- Power Application
- Data/Communication Cabling
- Other Factors to Consider

#### Bottom Type

- Type of Cable
- Cost vs. Strength
- Cable Exposure
- Cable Attachment

#### Fitting Radius

- Cable Flexibility
- Space Limitations

# Cable Tray - Straight Sections - Northern Asia

## Straight Section Part Numbering - 25mm Height

Example: **P 025 V C P 15 SS - 200 - 3000 - NA** (Northern Asia)

Tray Type	Height	Bottom Type	Return Flange Type	Material	Thickness	Type	Width	Length
<b>P =</b> (Perforated & Solid Cable Tray)	<b>025 =</b> 25mm	<b>S = Solid</b> <b>V = Perforated</b>	<b>C = 90°</b>	<b>P = Pre-Galv</b> <b>G = HDGAF</b> <b>SS6 = Stainless Type 316</b>	<b>10 * = 1.0mm</b> <b>15 = 1.5mm</b> <b>20 = 2.0mm</b>	<b>SS =</b> Straight Section	<b>050 = 50mm</b> <b>100 = 100mm</b> <b>150 = 150mm</b> <b>200 = 200mm</b> <b>300 = 300mm</b> <b>400 = 400mm</b> <b>500 = 500mm</b> <b>600 = 600mm</b>	<b>3000 =</b> 3000mm

\* 1.0mm thickness is only available in widths up to and including 300 (300mm).

Splice plates not supplied with straight sections. Order standard splice plates separately from page 59. One (1) pair required to connect to system.

### 90° Return Flange (C) with Perforated Bottom (V)

Notes:

Perforated slot dimensions and patterns may vary depending on tray size and type.

The 180° return flange is not available on 025 tray heights.

## Perforated & Solid Cable Tray Dimensional Drawing - Tray Height 25mm

### 90° Return Flange (C)

All dimensions are in millimetres unless otherwise specified.

# Cable Tray - Straight Sections - Northern Asia

## Straight Section Part Numbering - 50mm Height

Example: **P 050 V C P 15 SS - 200 - 3000 - NA** (Northern Asia)

Tray Type	Height	Bottom Type	Return Flange Type	Material	Thickness	Type	Width	Length
<b>P =</b> (Perforated & Solid Cable Tray)	<b>050 =</b> 50mm	<b>S = Solid</b> <b>V = Perforated</b>	<b>R = 180°</b> <b>C = 90°</b>	<b>P = Pre-Galv</b> <b>G = HDGAF</b> <b>SS6 = Stainless Type 316</b>	<b>10 * = 1.0mm</b> <b>15 = 1.5mm</b> <b>20 = 2.0mm</b>	<b>SS =</b> Straight Section	<b>050 = 50mm</b> <b>100 = 100mm</b> <b>150 = 150mm</b> <b>200 = 200mm</b> <b>300 = 300mm</b> <b>400 = 400mm</b> <b>500 = 500mm</b> <b>600 = 600mm</b> <b>900 = 900mm</b>	<b>3000 =</b> 3000mm

\* 1.0mm thickness is only available in widths up to and including 300 (300mm).

Splice plates not supplied with straight sections. Order standard splice plates separately from page 59. One (1) pair required to connect to system.

### 180° Return Flange (R) with Solid Bottom (S)

### 90° Return Flange (C) with Perforated Bottom (V)

Note:

Perforated slot dimensions and patterns may vary depending on tray size and type.

### Perforated & Solid Cable Tray Dimensional Drawing - Tray Height 50mm

All dimensions are in millimetres unless otherwise specified.

# Cable Tray - Straight Sections - Northern Asia

## Straight Section Part Numbering - 75mm Height

Example: **P 075 V C P 15 SS - 200 - 3000 - NA** (Northern Asia)

Tray Type	Height	Bottom Type	Return Flange Type	Material	Thickness	Type	Width	Length
<b>P =</b> (Perforated & Solid Cable Tray)	<b>075 =</b> 75mm	<b>S = Solid</b> <b>V = Perforated</b>	<b>R = 180°</b> <b>C = 90°</b>	<b>P = Pre-Galv</b> <b>G = HDGAF</b> <b>SS6 = Stainless Type 316</b>	<b>10 * = 1.0mm</b> <b>15 = 1.5mm</b> <b>20 = 2.0mm</b>	<b>SS =</b> Straight Section	<b>100 = 100mm</b> <b>150 = 150mm</b> <b>200 = 200mm</b> <b>300 = 300mm</b> <b>400 = 400mm</b> <b>500 = 500mm</b> <b>600 = 600mm</b> <b>900 = 900mm</b>	<b>3000 =</b> 3000mm

\* 1.0mm thickness is only available in widths up to and including 300 (300mm).

Splice plates not supplied with straight sections. Order standard splice plates separately from page 59. One (1) pair required to connect to system.

Perf & Solid Bottom Tray Northern Asia

### 180° Return Flange (R) with Solid Bottom (S)

### 90° Return Flange (C) with Perforated Bottom (V)

Note:

Perforated slot dimensions and patterns may vary depending on tray size and type.

### Perforated & Solid Cable Tray Dimensional Drawing - Tray Height 75mm

#### 180° Return Flange (R)

#### 90° Return Flange (C)

All dimensions are in millimetres unless otherwise specified.

# Cable Tray - Straight Sections - Northern Asia

## Straight Section Part Numbering - 100mm Height

Example: **P 100 V C P 15 SS - 200 - 3000 - NA** (Northern Asia)

Tray Type	Height	Bottom Type	Return Flange Type	Material	Thickness	Type	Width	Length
<b>P =</b> (Perforated & Solid Cable Tray)	<b>100 =</b> 100mm	<b>S = Solid</b> <b>V = Perforated</b>	<b>R = 180°</b> <b>C = 90°</b>	<b>P = Pre-Galv</b> <b>G = HDGAF</b> <b>SS6 = Stainless Type 316</b>	<b>10 * = 1.0mm</b> <b>15 = 1.5mm</b> <b>20 = 2.0mm</b>	<b>SS =</b> Straight Section	<b>100 = 100mm</b> <b>150 = 150mm</b> <b>200 = 200mm</b> <b>300 = 300mm</b> <b>400 = 400mm</b> <b>500 = 500mm</b> <b>600 = 600mm</b> <b>900 = 900mm</b>	<b>3000 =</b> 3000mm

\* 1.0mm thickness is only available in widths up to and including 300 (300mm).

Splice plates not supplied with straight sections. Order standard splice plates separately from page 59. One (1) pair required to connect to system.

### 180° Return Flange (R) with Solid Bottom (S)

### 90° Return Flange (C) with Perforated Bottom (V)

Note:

Perforated slot dimensions and patterns may vary depending on tray size and type.

## Perforated & Solid Cable Ladder Dimensional Drawing - Side Rail Height 100mm

### 180° Return Flange (R)

### 90° Return Flange (C)

All dimensions are in millimetres unless otherwise specified.

# Cable Tray - Splice Plates & Cover Clamps - Northern Asia

## Bottom Splice Plates (Mounted on bottom of tray to help stabilize tray connections)

(Sold Individually With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316

Part Number	Tray Widths	Plate Width	Number of Holes
PBS**-1-NA	50	44	2
PBS**-2-NA	100	94	4

PBS**-4-NA	400 - 500	194	4
PBS**-5-NA	600	394	6
PBS**-6-NA	900	594	6

## Side Splice Plates (Mounted outside of tray)

(Sold in Pairs With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316

Part Number	Tray Height
PSP025**-NA	25
PSP050**-NA	50
PSP075**-NA	75
PSP100**-NA	100

## Angled Bottom Splice Plates (Mounted outside of tray)

(Sold in Pairs With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316

Part Number	Tray Height
PAS**-NA	25, 50, 75, 100

# Cable Tray - Splice Plates & Cover Clamps - Northern Asia

## Expansion Splice Plates (Mounted outside of tray)

(Sold in Pairs With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316

Part Number	Tray Height
PEP025**-NA	25
PEP050**-NA	50
PEP075**-NA	75
PEP100**-NA	100

## Vertical Adjustable Splice Plates (Mounted outside of tray)

(Sold in Pairs With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316

Part Number	Tray Height
PVA025**-NA	25
PVA050**-NA	50
PVA075**-NA	75
PVA100**-NA	100

## Horizontal Adjustable Splice Plates (Mounted outside of tray)

(Sold in Pairs With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316
- Requires mitering of trays and drilling new splice plate holes on inside angle

Miter 1/2 the required angle on each tray end

Example:  
40° bend requires  
20° miter each end

Part Number	Tray Height
PHA025**-NA	25
PHA050**-NA	50
PHA075**-NA	75
PHA100**-NA	100

All dimensions are in millimetres unless otherwise specified.

# Cable Tray - Splice Plates & Cover Clamps - Northern Asia

## Right/Left Reducer Splice Plates (Mounted outside of tray)

(Sold as a Set With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316
- \_\_ Width: Insert width difference between the two trays

Part Number	Tray Height
PLR025** -NA	25
PLR050** -NA	50
PLR075** -NA	75
PLR100** -NA	100

## Straight Reducer Splice Plates (Mounted outside of tray)

(Sold as a Set With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316
- \_\_ Width: Insert one half the width difference between the two trays

Part Number	Tray Height
PSR025** -NA	25
PSR050** -NA	50
PSR075** -NA	75
PSR100** -NA	100

## Wrap-Around Cover Clamps

(Sold Individually With Hardware)

- \*\* Insert P for Pre-Galvanized, G for Hot Dip Galvanized, SS6 for Stainless Steel 316
- \_\_ Insert Tray Width  
 50 = 50mm, 100 = 100mm, 150 = 150mm, 200 = 200mm,  
 300 = 300mm, 400 = 400mm, 500 = 500mm, 600 = 600mm,  
 900 = 900mm

(Prefix) See page 63 for catalog number prefix and splice plate hole information.

Width dimensions are to inside wall. Manufacturing tolerances apply to all dimensions.

\*\*\* Vertical inside and outside bends are made only in the formed style as shown

All dimensions are in millimeters unless otherwise specified.

## Straight Section Covers

**A full range of covers is available for straight sections.**

**Solid flanged covers** should be used when maximum enclosure of the cable is desired and no accumulation of heat is expected.

**Flanged covers** have a 13mm flange.

Cover clamps are not included with the cover and must be ordered separately.

## Straight Section Covers

Perf & Solid Bottom Tray  
Northern Asia

\* 1.0mm thickness is only available in widths up to and including 300 (300mm).

\*\* All G (galvanized steel) covers only available in 1500 (1.5m) lengths.

All 900 (900mm) widths only available in 1500 (1.5m) lengths.

(Prefix) See page 89 for catalog number prefix and splice plate hole information.

Width dimensions are to inside wall. Manufacturing tolerances apply to all dimensions.

All dimensions are in millimeters unless otherwise specified.

# Cable Tray - Fittings - Southern Asia

## Horizontal Bends 60° (HB)

Splice plates not supplied with fittings.  
Order standard splice plates separately from page 85.  
One (1) pair required to connect to system.

Note:

Perforated slot dimensions and patterns may vary depending on tray size and type.  
(R) 180° return flange not available on 025 tray heights.

# Cable Cleats

Cable Cleats

## Trefoil Cable Cleat with LSF Pad

1. Recommended for installations where the highest levels of short circuit withstand are required.
2. Short circuit current tested in accordance with BS EN 50368:2003 standard.
3. Available for single and trefoil cable applications.
4. LSF-pad incorporates an integral low smoke, low fume, zero halogen pad.
5. Hardware to attach cleat to rung is included with cleat.

BS EN 50368:2003 (Cable Cleats for Electric Installations) Classification	
Cleat Type	Composite
Resistance to Electromechanical Force	130 kA peak / 50 kA RMS 600 mm spacing
Lateral Load Test	3.439 kg average
Axial Load Test	Pass
Operating Temperature Range	-40°C to +60°C
Impact Resistance	Very Heavy
Needle Flame Test	30 seconds

Technical Specifications	
Frame	50mm x 2mm Marine grade, Non-magnetic 316L
Closure Hardware	Captive 316 Stainless Steel M8 or M10 (M12 available) bolt and nylon-lock nut (Optional Hex Flange Lock Nut available)
Integral Pad	Low Smoke, Low Fume, Zero Halogen
Tools Required	Impact Wrench
Mounting Bolt	Provided with Cable Cleat

## Step 1: Know Your Cables

- What type of cable is being used?
  - Single or Multi-conductor
- What is the outside diameter of the cable(s)?
- What is the cable arrangement (single conductor cables only)?
  - Flat or Trefoil
- If a ground wire will be installed within the cleat, you will need the ground wire outside diameter.

## Step 2: Know Your System

- What is the available short circuit current (RMS or  $i_p$  (peak))?
- What type of B-Line cable ladder is installed?

## Step 3: Select Your Cable Cleats

- See Pages 106 & 107

## Step 4: Determine Cleat Spacing for Installation

Your cable diameter is equal to the spacing between conductor centers shown below. Find your cable diameter at the top of the table and look down at the column below it. Find the value equal to or greater than the available short circuit for your system.

Single Conductor Short Circuit Withstand Table													
Max. Cable Cleat Spacing (A)		Spacing Between Conductor Centers (mm)											
		23	25	27	29	31	33	35	37	39	41	43	45
mm	In.	$i_p$ peak (kA)											
225	9	179	187	194	203	209	216	220	229	234	240	246	250
300	12	155	163	168	174	181	187	192	198	203	209	214	215
450	18	128	133	137	144	148	152	157	161	165	170	174	178

Cable Cleats

All dimensions are in millimeters unless otherwise specified.

# Cable Cleats

## IMPORTANT: Recommended Installation Procedures

It is important that the cleats are installed properly to secure your cables:

- It is not necessary for every cleat to be attached to the ladder. Every other cleat (■) must be attached to the ladder system to mount cable in ladder. Unattached cleats (□) provide additional restraint to keep cables bundled.
- The bend radius should be 8 to 12 times the cable diameter.
- Cable cleats should always be installed at the beginning, middle and end of a bend (●), and at no time should the distance between cleats on a bend be more than 0.3M center to center.

# Strut Systems

Bolted Framing

B-Line strut support systems are designed with many time-saving features. They are fully adjustable and reusable, with a complete line of channels, fittings and accessories for multi-purpose applications.

## No Welding - No Drilling - Multiple Applications

- Installs quickly
- No special tools required
- Use wrench and hacksaws
- Can be taken apart and re-used
- Provides the strength of a welded system
- Saves time by eliminating welding and drilling

1. Channel nut may be inserted anywhere along continuous slot. Designed for easy insertion and self-alignment.

2. A 90° turn aligns channel nut grooves with inturned lips of the channel.

3. Position fitting over channel nut and insert bolt to start any connection.

4. With the twist of a wrench, channel nut locks its teeth firmly against inturned lips.

B-Line strut system provides an economical solution for electrical, mechanical and industrial supports with an unlimited variety of applications in the construction industry.

### Electrical Applications

- Lighting Fixture Supports
- Raceway Systems
- Trapeze Hangers
- Pipe & Conduit Supports
- Cable Tray Supports
- Beam Adjustments

### Mechanical Applications

- Piping Racks
- Tunnel Pipe Stanchions
- Concrete Inserts
- Beam Attachments
- Pipe Risers

### Industrial Applications

- Racks and Shelving
- Partitions
- Production Line Supports
- Trolley Systems
- Wall Framing

# Strut Systems - Technical Data

## MATERIALS

### Carbon Steel

Channels made from high-quality carbon steel are continuously roll formed to precise dimensions. By cold working the steel mechanical properties are increased, allowing lightweight structures to carry the required load. Corrosion resistance of carbon steel varies widely with coating and alloy. See "Finishes" for more detailed information.

### Stainless Steel

Stainless steel channel is available in AISI Type 316 material. Type 316 is non-magnetic and belongs to the austenitic stainless steels group, based on alloy content and crystallographic structure. Like carbon steel, stainless steel exhibits increased strength when cold worked by roll-forming.

Several conditions make the use of stainless steel ideal. These include reducing long term maintenance costs, high ambient temperatures, appearance, and stable structural properties such as yield strength, and high creep strength.

Type 316 resists most organic chemicals, dye stuffs and a wide variety of inorganic chemicals at elevated or cryogenic temperatures. Type 316 contains nickel and molybdenum to give it better corrosion resistance in chloride and sulfuric acid environments. More specific information concerning Type 316 is available from B-Line.

## FINISHES

### Zinc Coatings

Zinc protects steel in two ways. First it protects the steel as a coating and second as a sacrificial anode to repair bare areas such as cut edges, scratches, and gouges. The corrosion protection of zinc is directly related to its thickness and the environment. This means a 5µm coating will last twice as long as a 2.5µm coating in the same environment.

Galvanizing also protects cut and drilled edges.

### Electrogalvanized Zinc

Electrogalvanized Zinc (also known as zinc plated or electroplated) is the process by which a coating of zinc is deposited on the steel by electrolysis from a bath of zinc salts.

A rating of Fe/ZN 5 also known as SC1, B-Line hardware standard, provides a minimum zinc coating thickness of 5µm.

When exposed to air and moisture, zinc forms a tough, adherent, protective film consisting of a mixture of zinc oxides, hydroxides, and carbonates. This film is in itself a barrier coating which slows subsequent corrosive attack on the zinc. This coating is usually recommended for indoor use in relatively dry areas, as it provides ninety-six hours protection in salt spray testing per AS 2331.3.1 / ASTM B117.

## Hot Dip Galvanized After Fabrication (Hot dip galvanized or batch hot dip galvanized)

Hot dip galvanized strut products are fabricated from steel and then completely immersed in a bath of molten zinc. A metallic bond occurs resulting in a zinc coating that completely coats all surfaces, including edges and welds.

Another advantage of this method is coating thickness. Strut products that are hot dip galvanized after fabrication have a minimum thickness of 460g/m<sup>2</sup> on each side, or a total 920g/m<sup>2</sup>, according to AS/NZS 4680 / ASTM A123.

The zinc thickness is controlled by the amount of time each part is immersed in the molten zinc bath as well as the speed at which it is removed. The term "double dipping" refers to parts too large to fit into the galvanizing kettle; therefore, must be dipped one end at a time. It does not refer to extra coating thickness.

The layer of zinc which bonds to steel provides a dual protection against corrosion. It protects first as an overall barrier coating. If this coating happens to be scratched or gouged, zinc's secondary defense is called upon to protect the steel by galvanic action.

Hot-Dip Galvanized After Fabrication is recommended for prolonged outdoor exposure and will usually protect steel for 20 years or more in most atmospheric environments and in many industrial environments. For best results, a zinc rich paint (available from B-Line) should be applied to field cuts. The zinc rich paint will provide immediate protection for these areas and eliminate the short time period for galvanic action to "heal" the damaged coating.

## WELDING

The welding procedures used in the fabrication of B-Line steel products are in accordance with recognized industry standards. To achieve the highest quality in our manufacturing processes, our welders are 3rd party certified.

### MIG Welding

MIG welded, more properly called gas metal arc welded (GMAW) combination channels and fittings, are produced when physical dimensions or certain combinations require a weld process other than automatic spot welding. The same quality control requirements are imposed on MIG welded and spot welded products.

### Quality Assurance

Our Quality Assurance Program has been developed and implemented for compliance with ISO 9001:2008. B-Line also complies with various industry standards and specifications.

# Strut Systems - Technical Data

## CORROSION

All metal surfaces are affected by corrosion. Depending on the physical properties of the metal and the environment to which it is exposed, chemical or electromechanical corrosion may occur.

### Atmospheric Corrosion

Atmospheric corrosion occurs when metal is exposed to airborne liquids, solids or gases. Some sources of atmospheric corrosion are moisture, salt, dirt and sulphuric acid. This form of corrosion is typically more severe outdoors, especially near marine environments.

### Chemical Corrosion

Chemical corrosion takes place when metal comes in direct contact with a corrosive solution. Some factors which affect the severity of chemical corrosion include: chemical concentration level, duration of contact, frequency of washing, and operating temperature.

### Storage Corrosion

Wet storage stain (white rust) is caused by the entrapment of moisture between surfaces of closely packed and poorly ventilated material for an extended period. Wet storage stain is usually superficial, having no affect on the properties of the metal.

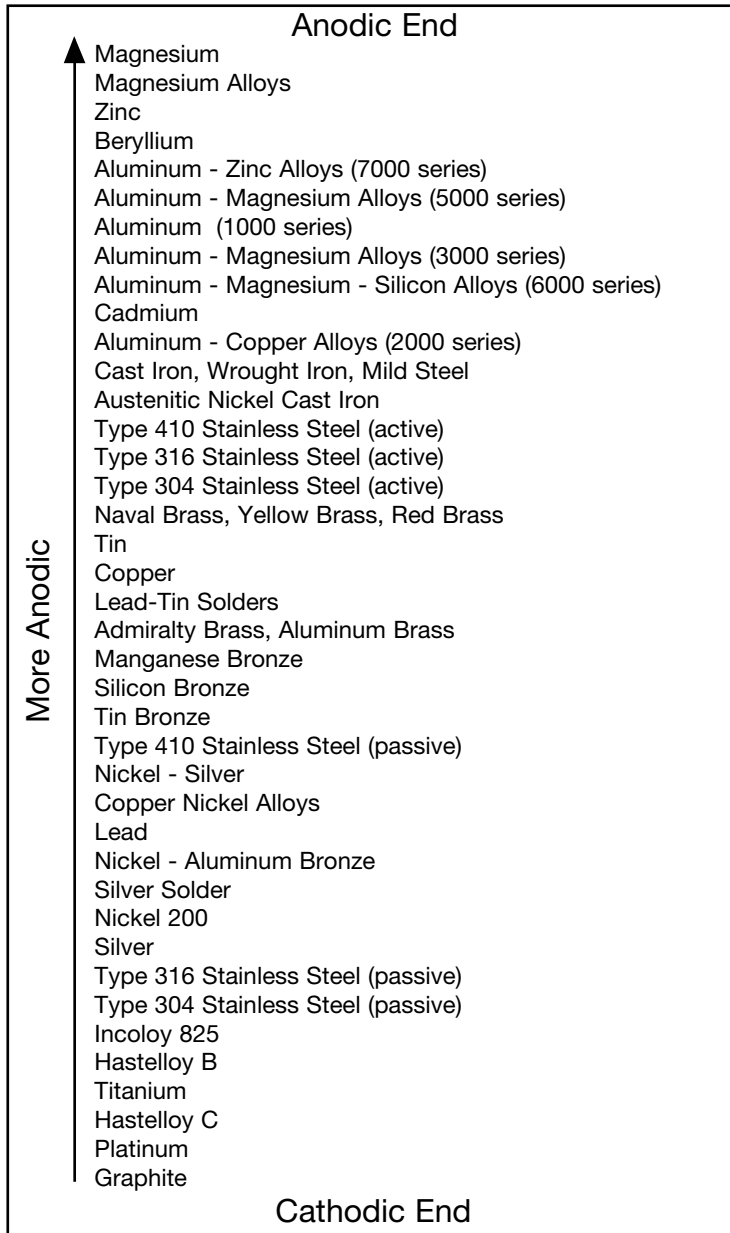

Light staining normally disappears with weathering. Medium to heavy build up should be removed in order to allow the formation of normal protective film. Proper handling and storage will help to assure stain-free material. If product arrives wet, it should be unpacked and dried before storage. Dry material should be stored in a well ventilated "low moisture" environment to avoid condensation formation. Outdoor storage is undesirable, and should be avoided whenever possible.

## Galvanic Corrosion

Galvanic corrosion occurs when two or more dissimilar metals are in contact in the presence of an electrolyte (ie. moisture). An electrolytic cell is created and the metals form an anode or a cathode depending on their relative position on the Galvanic Series Table. The anodic material will be the one to corrode. Anodic or cathodic characteristics of two dissimilar metals will depend on the type of each material. For example: If zinc and steel are in contact, the zinc acts as the anode and will corrode; the steel acts as the cathode, and will be protected. If steel and copper are in contact, the steel is now the anode and will corrode. The rate at which galvanic corrosion occurs depends on several factors:

1. The relative position on the Galvanic Series Table - the further apart materials are in the Galvanic Series Table, the greater the potential for corrosion of the anodic material.
2. The amount and concentration of electrolyte present - an indoor, dry environment will have little or no galvanic corrosion compared to a wet atmosphere.
3. The relative size of the materials - a small amount of anodic material in contact with a large cathodic material will result in greater corrosion. Likewise, a large anode in contact with a small cathode will decrease the rate of attack.

## GALVANIC SERIES IN SEA WATER

Metals in descending order of activity in the presence of an electrolyte.

## Design of Strut Systems

### Beams

Beams are usually defined as horizontal members which are subjected to vertical loads such as shelves, platforms or supports for pipes, conduits or cable ladders. The following is a brief overview of common beam configurations:

#### Simple Beam

An example of a simple beam is a length of channel placed across two cylinders. When a load is applied, the channel will support the load because of its stiffness. The cylinders serve to support the channel, but do not interfere with its natural tendency to flex or bend. Simple beam analysis is used almost universally for beam comparisons, even though it is seldom practical in field installations.

A cable ladder or conduit trapeze hanger closely resembles a simple beam.

#### Fixed Beam

This type of fixed support restricts the movement of the ends of the channel when a load is applied. Because of this, the stiffness of the channel at the ends and center is employed to resist the load. The result is a load capability which is greater than that of an identical simple beam.

The fixed beam can be approximated by bolting or welding a length of channel to rigid supports.

#### Cantilever Beam

Cantilever beams are often viewed as variations of a fixed beam, but they have special characteristics of their own. One end of the channel is firmly attached to a rigid support while the other end remains completely free.

A shelf bracket is an example of a cantilever beam.

#### Continuous Beam

This beam configuration is commonly used in lighting installations. The continuous beam possesses traits of both the simple and fixed beams. When equal loads are applied to all spans simultaneously, the counter-balancing effect of the loads on both sides of a support restricts the movement of the channel at the support, similar to that of the fixed beam. The end spans behave substantially like simple beams.

Continuous beam installations can typically support 20% more load than a simple beam of the same span with approximately half the deflection.

Therefore, simple beam data should be used for a general comparison only. An example of this configuration is found in a long run of channel when installed across several supports to form a number of spans.

#### Deflection

Deflection, commonly referred to as "sag", is inherent in applying a load to a beam and cannot be avoided. Any and all beams will deflect when loaded. The amount of deflection will vary depending upon the material and the stiffness or moment of inertia. The deflection equations in this section show that increasing the stiffness can be increased by a variety of methods. Increasing the depth of the channel is the most direct method.

The material used affects deflection in a manner which is significantly different from the way in which it affects load capacity. The deflection under load is inversely proportional to a material property known as the "modulus of elasticity" designated by "E".

The modulus of elasticity is dependent upon the basic composition of the material and is not necessarily related to the material's strength.

#### Safety Factor

The design loads given for strut beam loads are based on a simple beam condition using allowable stress of 172 MPa. This allowable stress results in a safety factor of 1.68. This is based upon a virgin steel minimum yield strength of 227 MPa cold worked during rolling to an average yield stress of 289 MPa.

Aluminum typically has an elastic modulus which is  $\frac{1}{3}$  that of steel even though they may have identical strength. As a result, the deflection of aluminum channel will be three times that of steel channel under equal loading. In areas where structures will be subject to general viewing, deflection can produce a displeasing effect. To the untrained eye, a sagging channel may appear to be a result of poor design or excessive loading. This is not usually the case. Many properly designed channel installations will show a noticeable deflection at their designed loads. In areas where cosmetics are not important, deflection should not be a factor. Designing an entire installation based on minimal deflection could result in an over designed structure. This translates into increased material and installation cost. Where cosmetics are important, it may be necessary to limit the deflection to an aesthetically pleasing amount. This "acceptable deflection" amount is typically given as a fraction of the span. **1/240 span** deflection is typically the limit where the amount of deflection appears negligible. For example, a beam span of 6000mm would be allowed 25mm (6000/240) of deflection at the mid point. A 3000mm span would only be allowed 12.5mm (3000/240) of deflection. The maximum load for the channel must be limited in order to remain under these deflection requirements. The allowable load resulting in 1/240 span deflection is posted in the beam load chart for each channel size.

For even more stringent deflection requirements, an allowable load is listed in the beam load charts which results in **1/360 span** deflection. This amount of deflection is sometimes used for beams in finished ceilings that are to be plastered.

# Strut Systems - Technical Data

## Twisting & Lateral Bracing

Loading of strut on long spans can cause torsional stress, resulting in the tendency of the strut to twist or bend laterally. This phenomenon reduces the allowable beam loads as shown in the beam loading charts. It is recommended that long spans be supported in a manner to prevent twisting (fixed ends), and that the channel have adequate lateral bracing. Many typical strut applications provide this support and bracing inherently. Piping, tubing, cable ladders, or conduits mounted to the strut with straps and clamps prevent twisting or lateral movement. If no such lateral support exists, contact the factory for loading recommendations.

## Columns

Columns are vertical members which carry loads in compression. One common example of a channel column is the vertical members of a storage rack.

In theory, a column will carry a load equal to its cross sectional area multiplied by the ultimate compressive stress of the material of which the column is made. In reality, there are many factors affecting the load capacity of a column, such as the tendency to buckle or twist laterally (torsional-flexural buckling), the type of connection at the top or bottom, the eccentricity of the load application, and material imperfections. Several of these failure modes have been considered in the allowable column load tables shown in the "Channel" section of this catalog.

B-Line strongly recommends that the engineer perform a detailed study of the many variable conditions before the selection process begins.

## Design Factors to be Considered

The loading capacity of channel depends primarily on the material, its cross-sectional design, and the beam or column loading configuration. It should be noted that if two lengths of channel have identical designs and configurations, the one made of the stronger base material will support a larger load. Therefore, any comparison of channel should begin by determining whether the materials are approximately equal in strength.

The column loading chart for each channel lists the allowable load for each channel in compression. This load varies depending on the support condition or "K-factor".

Several "K-factors" are listed, which correspond to the following support conditions:

K = .8 pinned top - fixed bottom

K = .65 fixed top - fixed bottom

K = 1.0 pinned top - pinned bottom

K = 1.2 free top - fixed bottom

There are a number of physical properties which are important to the complete design of a channel member; the "section modulus" designated as "Sx" or "Sy", "moment of inertia" designated by "Ix" or "Iy", and the "radius of gyration" which is given as "rx" or "ry".

Every structural material has its own maximum or ultimate stress, which is usually expressed in pascals. Any load which causes a member to fail is referred to as its "ultimate" load. In order to prevent channel from being accidentally loaded up to or beyond its ultimate load, a safety factor is included into the design. The ultimate load is divided by the safety factor to obtain the "recommended" or "allowable" working load.

When evaluating channel under various beam conditions, it is often more convenient to compare in terms of the ultimate or recommended "bending moment". Simple equations show the stress is directly proportional to the bending moment.

Therefore, comparing bending moments can save time in repeated calculations. The chart containing Formulas on Common Beam Loadings (following page) shows how to calculate the bending moment for various configurations and load conditions. It should be noted that the bending moment is usually not constant, but varies along the length of the span. However, the channel must be designed for a single point, which is the point of maximum bending moment.

For information regarding dynamic or seismic design, contact B-Line's Home Office.

## General Information

### Torque

The torque values given throughout the catalog are to be used as a guide only. The relationship between the applied torque or torque wrench reading and the actual tension created in the bolt may be substantially different. For example, a dry non-lubricated bolt with a heavy plating may rate 50% as efficient as a bolt which is lubricated with a mixture of heavy oil and graphite. Other important factors affecting torque-tension relationships include friction under the bolt head or nut, hole tolerances, and torque wrench tolerances. Accuracy of many commercial torque wrenches may vary as much as plus or minus 25%.

### Charts and Tables

Charts and tables in this section are compiled from information published by nationally recognized organizations and are intended for use as a guide only. B-Line recommends that users of this information determine the validity of such information as applied to their own application.

## RECOMMENDED STRUT SYSTEM SPECIFICATION

Brackets [ ] indicate alternative specifications which may be substituted by the project engineer.

### PART 1 - GENERAL

#### 1.01 WORK INCLUDED

- A. Continuous slot, bolted metal framing channels and all associated fittings and hardware.
- B. Trapeze type supports for cable ladder, conduit, pipe and other similar systems.
- C. Use of bolted metal framing as a surface metal raceway.

#### 1.02 REFERENCES

- A. AS/NZS 4680 / ASTM A123 - Specification for Zinc (hot-dip galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars and Strips.
- B. AS/NZS 1594 / ASTM A1011 - Specification for Steel, Sheet and Strip, Carbon, Hot-Rolled, Structural Quality.
- C. AS 1789 / ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
- D. AS/NZS 1594 / ASTM A1018 - Standard Specification for Steel, Sheet and Strip, Heavy-Thickness Coils, Carbon, Hot-Rolled, Structural Quality.
- E. MFMA - Metal Framing Standards Publication, MFMA-4.

#### 1.03 QUALITY ASSURANCE

- A. Manufacturers : Firms regularly engaged in the manufacture of bolted metal framing of the types required, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. For stainless steel items, the part number shall contain a material designator (EXAMPLE: B-Line B22SS6 for type 316 or B22SS4 for type 304), or a separate stamp shall be included to reference the type of material used.
- C. MFMA Compliance: comply with the latest revision of MFMA Standard Publication Number MFMA-4, "Metal Framing".
- D. NEC Compliance: Comply with the latest revision NFPA 70 - Article 352 "Surface Metal Raceways and Surface Nonmetallic Raceways".

#### 1.04 SUBMITTALS

- A. Submit drawings of strut and accessories including clamps, brackets, hanger rods and fittings.
- B. Submit manufacturer's product data on strut channels including, but not limited to, types, materials, finishes, gauge thickness and hole patterns. For each different strut cross section, submit cross sectional properties including Section Modulus (S<sub>x</sub>) and Moment of Inertia (I<sub>x</sub>).

#### 1.05 DELIVERY, STORAGE AND HANDLING

- A. Deliver strut systems and components carefully to avoid breakage, denting, and scoring finishes. Do not install damaged equipment.
- B. Store strut systems and components in original cartons and in clean dry space; protect from weather and construction traffic.

### PART 2 - PRODUCTS

#### 2.01 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with these specifications, strut systems to be installed shall be as manufactured by B-Line, Inc. [or engineer approved equal.]

#### 2.02 STRUT CHANNELS AND COMPONENTS

- A. General: Strut shall be 41mm wide in varying heights and welded combinations as required to meet load capacities and designs indicated on the drawings.
- B. Material and Finish: Material and finish specifications for each strut type are as follows:
  1. Hot-Dip Galvanized Steel: Strut shall be made from structural quality steel meeting the minimum mechanical properties of AS/NZS 1594 / ASTM A1011 and shall be hot-dip galvanized after fabrication in accordance with AS/NZS 4680 / ASTM A123. Fittings shall be manufactured from steel meeting the minimum requirements of AS/NZS 1594 / ASTM A1018, and hot-dip galvanized after fabrication in accordance with AS/NZS 4680 / ASTM A123. All hardware shall be stainless steel Type 316 or hot-dip galvanized AS 1214 / ASTM A153.
  2. Stainless Steel: All strut, fittings and hardware shall be made of stainless steel Type 316 as indicated. Channels must be identified as required in previous section 1.03 Quality Assurance.

### PART 3 - EXECUTION

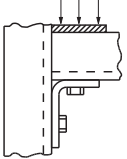

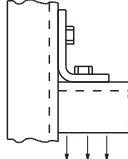

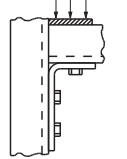

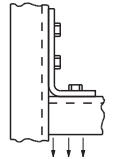

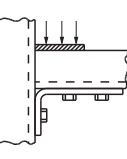

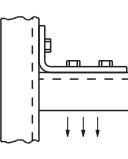

#### 3.01 INSTALLATION

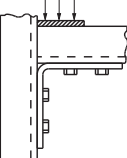

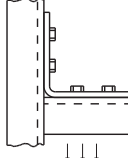

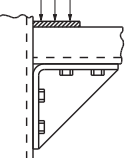

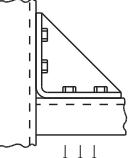

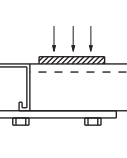

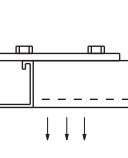

- A. Install strut as indicated; in accordance with equipment manufacturer's recommendations, and with recognized industry practices.
- B. All nuts and bolts shall be tightened to the following values.

Bolt Size	Torque (Nm)
M6	12
M8	17
M10	36
M12	62

# Strut Systems - Technical Data

DESIGN LOAD DATA (For typical channel-fitting connections when USED IN PAIRS).

90° Fittings						
Channel Thickness						
	kN	kN	kN	kN	kN	kN
2.6mm	6.67	4.45	8.90	6.67	6.67	4.45

90° Fittings				Flat Fittings		
Channel Thickness						
	kN	kN	kN	kN	kN	kN
2.6mm	11.12	8.90	13.34	11.12	4.45	4.45

Design load data includes a safety factor of 2.5 (safety factor = ratio of ultimate load to design load).

## Channel

B-Line channel is cold formed on our modern rolling mills from 2.6mm low carbon steel strips. A continuous slot with inturned lips provides the ability to make attachments at any point.

## Lengths & Tolerances

All channels excluding 'SH' style  
 ± 3.2mm on 3m and  
 ± 4.76mm on 6m

All 'SH' channels only  
 ± 6.35mm on 3m and  
 ± 12.70mm on 6m

Custom lengths are available upon request.

## Slots

B-Line slotted series of channels offer full flexibility. A pre-punched slot pattern eliminates the need for precise field measuring for hole locations.

## Materials & Finishes (Unless otherwise noted)

### Steel: Plain & Pre-galvanized

2.6mm thick

Finish Code	Finish	Specification
PLN	Plain	AS/NZS 1594 / ASTM A1011
HDG	Hot-Dipped Galvanized	AS/NZS 4680 / ASTM A123
SS6	Stainless Steel	Type 316

Note: A minimum order may apply on special material and finishes.

## Design Load (Steel & Stainless Steel)

The design loads given for strut beam loads are based on a simple beam condition using an allowable stress of 172 MPa. This allowable stress results in a safety factor of 1.68. This is based upon virgin steel minimum yield strength of 227 MPa cold worked during rolling to an average yield stress of 289 MPa. For aluminum channel loading multiple steel loading by a factor of 0.38.

## Welding

Weld spacing is maintained at 76mm on center. Through high quality control testing of welded channels and continuous monitoring of welding equipment, B-Line provides one of the most consistent combination channels available today.

## Metric

Unless noted, all metric dimensions are in millimeters.

## Channel Part Numbering

All dimensions are in millimeters unless otherwise specified.

## Buzznut™

- Can be installed at any desired position on the ATR, eliminating the need to thread hex nuts up along ATR.
- Loading Safety Factor of 3.
- Torque: 8N•m
- Available in Zinc Plated (ZN) or 316 Stainless Steel (SS6).

Part No.	Thread Size	Loading kN	Wt./C kg
SLWNM6	M6	0.90	6.4
SLWNM8	M8	1.70	7.4
SLWNM10	M10	2.60	7.8
SLWNM12	M12	3.70	8.6

## SLN Slip-On Lock Nut

- Safety Factor of 3
- Standard finish: Zinc Plated (ZN) or 316 Stainless Steel (SS6)

Part No.	Thread Size	Wt./C kg
SLNM6	M6	5.8
SLNM8	M8	6.8
SLNM10	M10	7.2
SLNM12	M12	8.0

## B217P Plastic Snap Closure Strip For All 41.3mm Wide Channels

- Standard finishes: Gray (GRY) Plastic
- Standard length: 3m
- Wt./30.5m: 4.2kg

## B825 Series Plastic End Caps

- Material: Polyurethane
- Available in colors: Gray (GRY)

Part No.	Fits Channel Sizes	Wt./C kg
B825-22	B22	0.9
B825-52	B52	0.4

## HHCS

### Hex Head Cap Screws

- Standard finish: HDG, Stainless Steel Type 316

Part No.	Wt./C kg
M6x20 HHCS	0.63
M6x25 HHCS	0.77
M8x20 HHCS	1.04
M8x25 HHCS	1.27
M10x25 HHCS	1.90
M12x20 HHCS	3.48
M12x25 HHCS	3.81
M12x30 HHCS	4.17

## HN

### Hex Nuts

- Standard finish: HDG, Stainless Steel Type 316

Part No.	Wt./C kg
M6 HN	0.32
M8 HN	0.45
M10 HN	0.68
M12 HN	1.63

## FW

### FLAT WASHERS

- Standard finish: HDG, Stainless Steel Type 316

Part No.	O.D. Outside Dia. mm	Wt./C kg
FW M6	18.7	0.32
FW M8	22.2	0.63
FW M10	25.4	0.77
FW M12	34.9	1.77

## ATR

### All Threaded Rod

- Available in 3000mm lengths
- Safety Factor of 5 on recommended load
- Standard finish: HDG, Stainless Steel Type 316

Part No. & Size	Threads Size	Recommended Load kN	Wt./30.5m kg
ATR M6	M6	1.32	6.1
ATR M8	M8	2.42	10.7
ATR M10	M10	3.66	15.3
ATR M12	M12	5.35	24.4

All dimensions are in millimeters unless otherwise specified.

# Strut Systems - Fittings

A selection of fittings and accessories are available to complete B-Line bolted strut system.

## Dimensions

The following dimensions apply to all fittings except as noted.

## Materials & Finishes (Unless otherwise noted)

Finish Code	Finish	Specification
PLN	Plain	AS/NZS 1594 / ASTM A1018
HDG	Hot-Dipped Galvanized	AS/NZS 4680 / ASTM A123
SS6	Stainless Steel	Type 316

Note: A minimum order may apply on special material and finishes.

## Load Data

The load data published includes safety factor of 2.5 when used with 2.6mm channel (safety factor = ratio of ultimate load to the design load).

Use M12 x 20 hex head cap screws and BMS-12 channel nuts for the rated results.

## Recommended Bolt Torque

Bolt Size	M6	M8	M10	M12
Nm	12	17	36	62

## Hardware

Nuts and bolts are not included with the fittings and must be ordered separately, unless noted.

## Metric

All dimensions are in millimeters unless noted otherwise.

## B200 Series Square Washer

- Standard finishes: HDG, SS6

## B200-D Series No-Twist Square Washer

- Standard finishes: HDG, SS6

Part No.	A	Bolt Size	Wt./C kg
B201	11.1	M10	7.7
B202	14.2	M12	7.7
B201-D	11.1	M10	7.7
B202-D	14.2	M12	7.7

## B129 Two-Hole Splice Plate

- Standard finishes: HDG, SS6
- Wt./C: 16.8kg

## B140 Three-Hole Corner Plate

- Standard finishes: HDG, SS6
- Wt./C: 25.4kg

## B141 Three-Hole Splice Plate

- Standard finishes: HDG, SS6
- Wt./C: 24.9kg

## B341 Four-Hole Splice Plate

- Standard finishes: HDG, SS6
- Wt./C: 34.5kg

## B133 Four-Hole Tee Plate

- Standard finishes: HDG, SS6
- Wt./C: 34.0kg

## B143 Four-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 34.0kg

## B101 Two-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 16.8kg

All dimensions are in millimeters unless otherwise specified.

# Strut Systems - Fittings

## B230 Two-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 16.8kg

## B102 Three-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 25.4kg

## B103 Three-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 25.4kg

## B104 Four-Hole Corner Angle

- Standard finishes: HDG, SS6
- Wt./C: 35.4kg

## B409 Single Channel Bracket

- Safety Factor of 2.5
- Standard finishes: HDG, SS6

Part No.	A	Uniform Load kN	Wt./C kg
B409-300	300	4.27	105.2
B409-600	600	2.13	204.1

## B107 Five Hole U-Support

- Standard finishes: HDG, SS6
- Wt./C: 38.5kg

## B297 Double Channel Bracket

- Safety Factor of 2.5
- Standard finishes: HDG, SS6

Part No.	A	Uniform Load kN	Wt./C kg
B297-750	750	2.95	471.7
B297-1000	1000	2.06	653.2

## B279FL Post Base For B22

- Standard finishes: HDG, SS6
- Wt./C: 104.3kg

## B281AFL Post Base For B22A

- Standard finishes: HDG, SS6
- Wt./C: 113.4kg

## B441-22 Beam Clamp (Sold in Pieces)

- Design Load 5.34kN when used in pairs
- Safety Factor of 5
- 19.0mm Max. Flange Thickness
- For use with 20.6mm to 41.3mm high channel
- Recommended Torque: 16.9N•m
- Other flange thickness variations are available, contact B-Line Engineering for sizes
- Standard finishes: HDG, SS6
- Wt./C: 39.4kg

## B441-22A Beam Clamp (Sold in Pieces)

- Design Load 5.34kN when used in pairs
- Safety Factor of 5
- 19.0mm Max. Flange Thickness
- For use with 41.3mm to 82.5mm high channel
- Recommended Torque: 16.9N•m
- Other flange thickness variations are available, contact B-Line Engineering for sizes
- Standard finishes: HDG, SS6
- Wt./C: 42.2kg

All dimensions are in millimeters unless otherwise specified.
